

A black and white photograph showing a large-diameter concrete pipe being lowered into a deep trench. A crane with multiple cables is positioned above the pipe, and the pipe is being lowered into a trench that has been excavated into the ground. The trench walls are visible, and the pipe is positioned horizontally within it.

A large crawler crane is shown in the process of lifting a heavy, rectangular object, likely a bridge component or a large piece of machinery. The crane is positioned on a dirt or gravel surface, and its long lattice boom extends upwards and to the right. The background features a clear sky and some distant structures, suggesting an open construction or industrial area.
